List of contributors	x
Preface to first edition	xi
Preface to second edition	xiii
 1 Paint composition and applications — a general introduction	
R Lambourne	
1.1 A short history of paint	1
1.2 Paint or surface coating?	3
1.3 The components of paint	5
1.4 Paint making	16
1.5 Methods of application	17
1.6 Paint markets	18
 2 Organic film formers	
J Bentley	
2.1 Introduction	19
2.2 Natural polymers	23
2.3 Oils and fatty acids	24
2.4 Oleoresinous media	30
2.5 Alkyd resins	31
2.6 Polyester resins	40
2.7 Acrylic polymers	44
2.8 Emulsion and dispersion polymers	54
2.9 Non-aqueous dispersion polymerization	60
2.10 Amino resins	62
2.11 Phenol formaldehyde resins	66
2.12 Epoxy resins	67
2.13 Isocyanates	70
2.14 Silicone resins	74

2.15	Vinyl resins	75
2.16	Water-borne systems	76
2.17	Resins for electrodeposition	80
2.18	High solids coatings	82
2.19	Radiation-curing polymers	84
2.20	Powder-coating compositions	85
2.21	Resin manufacture	86
	Bibliography	87
	References	87
3	Pigments for paint	
	A G Abel	
3.1	Introduction	91
3.2	Definition	91
3.3	Required qualities of pigments	92
3.4	Pigment classification	105
3.5	Pigment nomenclature	108
3.6	Further types of pigments and terms used	109
3.7	Particulate nature of pigments and the dispersion process	114
3.8	Manufacture of pigments	119
3.9	Toxicity and the environment	124
3.10	Choosing pigments	125
3.11	Physical forms of pigment	127
3.12	Notes on families of pigments	129
	References	165
4	Solvents, thinners, and diluents	
	R Lambourne	
4.1	Introduction	166
4.2	The market for solvents in the paint industry	167
4.3	Solvent power or solvency	168
4.4	Solvent effects on viscosity	178
4.5	Evaporation of solvents from coatings	179
4.6	Flashpoint	180
4.7	Toxicity and environmental pollution	181
	Acknowledgement	183
	References	183
5	Additives for paint	
	R A Jeffs and W Jones	
5.1	Introduction	185
5.2	Anti-corrosive pigment enhancers	186
5.3	Antifoams	186
5.4	Antisettling agents	187
5.5	Antiskinning agents	188
5.6	Can-corrosion inhibitors	188
5.7	Dehydrators/antigassing additives	189
5.8	Dispersion aids	189
5.9	Driers	190

5.10	Electrical properties	192
5.11	Flash corrosion inhibitors	192
5.12	Floating and flooding additives	192
5.13	In-can preservatives	193
5.14	In-film preservatives	194
5.15	Insecticidal additives	194
5.16	Optical whiteners	195
5.17	Reodorants	195
5.18	Ultraviolet absorbers	195
5.19	Additive suppliers	196
6	The physical chemistry of dispersion	
	A Doroszkowski	
6.1	Introduction	198
6.2	Immersion and wetting of the pigment	199
6.3	Deagglomeration (mechanical breakdown of agglomerates)	203
6.4	Dispersion — colloid stabilization	205
6.5	Steric (or polymer) stabilization	219
6.6	Depletion flocculation and stabilization	224
6.7	Adsorption	227
6.8	Rate of flocculation	234
	References	240
7	Particle size and size measurement	
	A Doroszkowski	
7.1	Introduction	243
7.2	Definitions	243
7.3	Sampling	252
7.4	Methods of particle sizing	257
7.5	The best method?	280
	References	283
8	The industrial paint-making process	
	F K Farkas	
8.1	Introduction	286
8.2	The use of dispersants	286
8.3	Methods of optimizing millbases for dispersion	288
8.4	The instrumental formulating technique	290
8.5	Methods of dispersion and machinery	309
8.6	Mixing	325
8.7	Control techniques	327
	Acknowledgements	329
	References	329
9	Coatings for buildings	
	J A Graystone	
9.1	Introduction	330
9.2	Formulating considerations and constraints	331
9.3	Pigment–binder–solvent relationships	335

9.4	The nature of paint binder	350
9.5	Colour delivery	359
9.6	Meeting the needs of the substrate	365
9.7	Masonry and cementitious substrates	383
9.8	Metallic substrates	398
9.9	Plastic as a substrate	406
	References	406
10	Automotive paints	
	D A Ansdell	
10.1	Introduction	411
10.2	Pretreatment	415
10.3	Priming	419
10.4	Surfacers	431
10.5	Anti-chip coatings	438
10.6	Inverted or reverse process	438
10.7	Automotive topcoats	440
10.8	In-factory repairs	457
10.9	Painting of plastic body components	459
10.10	Spray application	461
10.11	Stoving procedures	472
10.12	Performance/testing	477
10.13	Future developments	483
	Acknowledgements	490
	Bibliography	491
11	Automotive refinish paints	
	A H Mawby	
11.1	Introduction	492
11.2	Topcoat systems	494
11.3	Colour	497
11.4	Future developments	500
	Bibliography	501
12	General industrial paints	
	G P A Turner	
12.1	Introduction	502
12.2	Factors governing the selection of industrial painting processes	503
12.3	Industrial application and curing methods	509
12.4	Finishing materials and processes in selected industrial painting operations	517
12.5	Developments and trends in general industrial finishing	526
	References	528
13	The painting of ships	
	R Lambourne	
13.1	Introduction	529
13.2	Corrosion	530

13.3	Surface preparation	533
13.4	Blast primers	534
13.5	Paint systems for ships	534
13.6	The painting of off-shore structures	547
	References	549
14	An introduction to rheology	
	T A Strivens	
14.1	Introduction	550
14.2	History of viscosity measurements	551
14.3	Definitions	552
14.4	Methods of measurement	560
14.5	Interpretation of results	567
	References	574
15	The rheology of paints	
	T A Strivens	
15.1	Introduction	575
15.2	General considerations on paint rheology — paint application processes	575
15.3	Experimental methods for measuring paint rheology for application and flow-out after application	581
15.4	Paint rheology during manufacture and storage	593
	References	595
16	Mechanical properties of paints and coatings	
	T A Strivens	
16.1	Introduction	598
16.2	Viscoelastic properties of polymers	599
16.3	Ultimate mechanical properties of polymers	603
16.4	Experimental methods for determining mechanical properties of coatings	605
16.5	Discussion of experimental methods	611
16.6	Technological tests for mechanical properties	612
16.7	Acoustic emission	615
16.8	Recent developments	617
	References	618
17	Appearance qualities of paint — basic concepts	
	T R Bullett	
17.1	Introduction	621
17.2	Physics of reflection by paint/air interfaces	621
17.3	Light scattering and absorption by paint films	624
17.4	Colour of pigment mixtures and pigmented films	629
17.5	Changes in paint films	634
17.6	Fluorescence and phosphorescence	636
17.7	Colour appreciation	636
17.8	Further reading	639
	References	640

18 Specification and control of appearance**T R Bullett**

18.1 Gloss	642
18.2 Opacity of paint films	647
18.3 Specification and control of colour	652
18.4 Colour control in paint manufacture	657
Acknowledgements	657
References	657

19 Durability testing**R Lambourne**

19.1 Introduction	658
19.2 Chemical resistance testing	661
19.3 Testing mechanical properties of paints	668
19.4 Accelerated weathering	675
19.5 Natural weathering	686
19.6 Suppliers of accelerated weathering test equipment	692
Acknowledgements	692
References	693

20 Computers and modelling in paint and resin formulating**J Bentley**

20.1 Introduction	694
20.2 Software in the laboratory	695
20.3 Information technology and knowledge-based systems	695
20.4 Modelling and mathematical techniques	696
20.5 Molecular modelling	700
20.6 Resin formulating and processes	701
20.7 Resin scale-up and manufacture	711
20.8 Polymer properties, curing, and network properties	712
20.9 Solvents and solubility properties	716
20.10 Paint formulation and manufacture, and coating performance ...	718
20.11 Experimental analysis, design, and quality control	719
Bibliography	719
References	720

21 Health and safety in the coatings industry**G R Hayward**

21.1 Introduction	725
21.2 Raw materials and intermediates	726
21.3 Occupational exposure	729
21.4 Provision of information	732
21.5 The approved supply list	732
21.6 Hazard details	738
21.7 Safety data sheets	739
21.8 Labelling of substances and preparations	740
21.9 Classification and labelling for transport (conveyance)	745
21.10 Control of hazardous substances	750
21.11 New substances regulations	752

21.12 Food contact coatings	753
21.13 Major accident hazards	756
21.14 Environmental protection	759
21.15 Conclusions	761
References	762
Appendix 1: risk phrases	762
Appendix 2: safety phrases	764
Index	767
