

CANDLE HOLDER

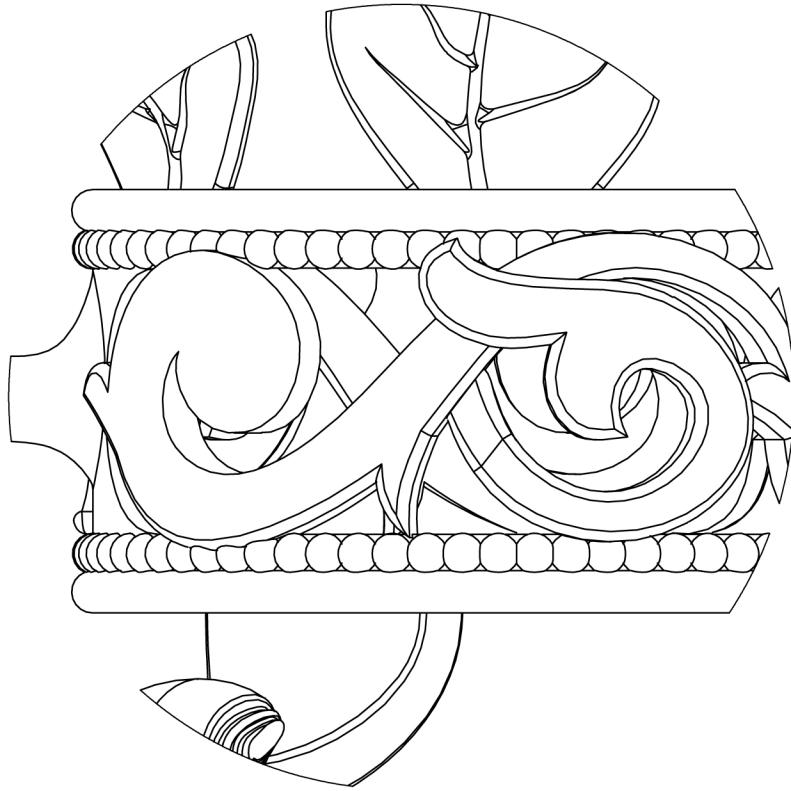

Create a decorative candle holder in SolidWorks using the tools you've learned so far. This part was created using the two layout sketches shown below. A blank part containing only the layout sketch shown below is available for download if you'd like to start there, but feel free to try creating your own variations. Additional dimensions and details are shown on the next two pages. Try coming up with your own decorative designs and use the available surfacing tools to create them. Good luck!
