

Standard Specification for Aluminum Bronze Rod, Bar, and Shapes¹

This standard is issued under the fixed designation B150/B150M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This specification establishes the requirements for aluminum bronze rod, bar, and shapes for Copper Alloys UNS Nos. C61300, C61400, C61900, C62300, C62400, C63000, C63020, C63200, C64200, and C64210.

NOTE 1—Product intended for hot forging is described in Specification [B124/B124M](#).

NOTE 2—**Warning**—Mercury has been designated by EPA and many state agencies as a hazardous material that can cause central nervous system, kidney, and liver damage. Mercury, or its vapor, may be hazardous to health and corrosive to materials. Caution should be taken when handling mercury and mercury-containing products. See the applicable product Material Safety Data Sheet (MSDS) for details and EPA's website (<http://www.epa.gov/mercury/faq.htm>) for additional information. Users should be aware that selling mercury or mercury-containing products, or both, in your state may be prohibited by state law.

1.2 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory requirements prior to use.*

3. General Requirements

3.1 The following sections of Specification [B249/B249M](#) constitute a part of this specification:

3.1.1 Terminology,

3.1.2 Materials and Manufacture,

3.1.3 Workmanship, Finish, and Appearance,

3.1.4 Sampling,

3.1.5 Number of Tests and Retests,

3.1.6 Specimen Preparation,

3.1.7 Test Methods,

3.1.8 Significance of Numerical Limits,

3.1.9 Inspection,

3.1.10 Rejection and Rehearing,

3.1.11 Certification,

3.1.12 Mill Test Report,

3.1.13 Packaging and Package Marking, Preservation and Delivery, and

3.1.14 Supplementary Requirements.

3.2 In addition, when a section with a title identical to those referenced in [3.1](#), appears in this specification, it contains

³ The last approved version of this historical standard is referenced on www.astm.org.

*A Summary of Changes section appears at the end of this standard

TABLE 1 Chemical Requirements

Elements	Composition, %									
	C61300	C61400	C61900	C62300	Copper Alloy UNS No.		C63020	C63200	C64200	C64210
					C62400	C63000

Lead, max	0.01	0.01	0.02	...	...	...	0.03	0.02	0.05	0.05
Arsenic, max	...	...	...	...	...	...	...	...	0.15	0.15
Phosphorus, max	0.015	0.015	...	...	...	...	...	...	...	...
Other named elements ^B							C			

^A Iron content shall not exceed nickel content.

^B When the product is for subsequent welding applications and is so specified by the purchaser, chromium shall be 0.05 % max, cadmium 0.05 % max, zirconium 0.05 % max, and zinc 0.05 % max.

^C Chromium shall be 0.05 max and cobalt shall be 0.20 max.

additional requirements that supplement those appearing in Specification **B249/B249M**.

4. Ordering Information

4.1 Include the following information when placing orders for product under this specification, as applicable:

- 4.1.1 Specification designation and year of issue,
- 4.1.2 Copper alloy UNS No. (See **Table 1**),
- 4.1.3 Temper (see Temper section),
- 4.1.3.1 When Alloy UNS No. C63000 is specified, specify standard strength or high strength temper (See **Table 2**),
- 4.1.4 Product cross-section (for example round, hexagonal, square, and so forth),
- 4.1.5 Dimensions (diameter or distance between parallel surfaces and length) and permissible variations (Section 10),
- 4.1.5.1 When product of Copper Alloy UNS No. C63020 is specified, the tolerances for diameter, thickness, width, and length shall be part of the contract or purchase order and shall be agreed upon between the supplier and the purchaser.
- 4.1.5.2 *Shapes*—When product is shapes, the dimensional tolerances shall be as agreed upon between the manufacturer and the purchaser and shall be specified.
- 4.1.6 Quantity, total weight, footage, or number of pieces for each size.
- 4.1.7 If product is being purchased for agencies of the U.S. government.

4.2 The following options are available and should be specified at the time of placing the order when required:

- 4.2.1 If Copper Alloy C61300 material is intended for subsequent welding applications (See Note B, **Table 2**),
- 4.2.2 Certification,
- 4.2.3 Mill test reports,
- 4.2.4 Residual stress test (Performance Requirements section)
- 4.2.4.1 Ammonia Vapor Test or Mercurous Nitrate Test,
- 4.2.4.2 For Ammonia Vapor Test, pH value other than 10.

4.2.5 If piston finish or shafting is required, (Performance Requirements and Workmanship sections), and

4.2.6 When tensile test is required for alloys with hardness requirements in **Table 3** (see 8.2.1).

5. Materials and Manufacture

5.1 Manufacture:

5.1.1 *Copper Alloy UNS C63020*—Rod and Bar shall be heat-treated to 26 Rockwell hardness (C scale) (HRC) minimum as follows:

5.1.2 Heat to 1550°/1650°F [850/900°C] for 2 h minimum and quenched in water.

5.1.3 Temper at 900°/1000°F [480/540°C] for 2 h minimum and air cool to room temperature.

5.2 *Copper Alloy UNS C63200*—Rod and Bar shall be heat-treated as follows:

5.2.1 Heat to 1550°F [850°C] minimum for 1 h minimum at temperature and quench in water or other suitable medium,

5.2.2 Temper anneal at 1300 ± 25°F [700 ± 15°C] for 3 to 9 h at temperature as required to obtain desired mechanical properties, and

5.2.3 Heat treatment is not mandatory for sections that exceed 12 in. [300 mm] in diameter or thickness.

6. Chemical Composition

6.1 The material shall conform by alloy to the chemical composition requirements in **Table 1** for the copper alloy UNS designation specified in the ordering information.

6.2 For alloys in which copper is listed as “remainder,” copper is the difference between the sum of all elements determined and 100 %.

6.2.1 When all elements in **Table 1** are determined, the sum of results shall be 99.5 % minimum for all alloys except C61300 which shall be 99.8 % min.

TABLE 2 Continued

Temper Designation		Diameter or Distance Between Parallel Surfaces, ^A in. [mm]	Tensile Strength, min ksi [MPa]	Yield Strength, min ksi [MPa], at 0.5 % Extension Under Load	Elongation in 4 × Diameter or Thickness of Specimen min, % ^B
Code	Name				
M10	as hot forged—air cooled	over 3 [80] to 4 [100] incl over 4 [100]	70 [485]	30 [205]	15
M20	as hot rolled				
M30	as hot extruded				
M30	as hot extruded	shapes, all sizes	70 [485]	30 [205]	15

^A For rectangular bar, the Distance Between Parallel Surfaces as used in this table refers to the thickness.

^B Elongation values are based on 5.65 times the square root of the area for dimensions greater than 0.10 in. [2.5 mm]. In any case, a minimum gage length of 1 in. [25 mm] shall be used.

^C Yield strength at 0.2 % offset.

TABLE 3 Rockwell Hardness Requirements^A

Temper Designation		Diameter or Distance Between Parallel Surfaces, in. [mm]	Rockwell Hardness Determined on the Cross Section Midway Between Surface and Center
Code	Name		
Copper Alloy UNS No. C63020			
TQ30	Quench hardened and tempered	all sizes	C26 min
Copper Alloys UNS Designations C64200 and C64210			
HR50	drawn and stress relieved	0.5 [12] to 1.0 [25], incl.	B80 – 100
		over 1.0 [25] to 2.0 [50], incl.	B80 – 100
		over 2.0 [50] to 3.0 [80], incl.	B70 – 95
M30	as hot-extruded	over 3.0 [80] to 4.0 [100], incl.	B65 – 95
		over 4.0 [100]	B65 – 95
		shapes, all sizes	B65–95

^A Rockwell hardness requirements are not established for diameters less than 0.5 in. [12 mm].

6.3 These composition limits do not preclude the presence of other elements. By agreement between the manufacturer and the purchaser, limits may be established and analysis required for unnamed elements.

7. Temper

7.1 The standard tempers for products described in this specification, and as defined in Classification B601, are given in Tables 2 and 3.

7.1.1 Annealed tempers O20, O25, and O30.

7.1.2 Cold worked and stress relieved temper HR50.

7.1.3 As-manufactured tempers M10, M20, M30.

7.1.4 Heat treated tempers O26, O32, TQ30, TQ50 and TQ55.

NOTE 3—UNS No. C63000 has two available strength levels available in rod, standard strength and high strength.

8. Mechanical Property Requirements

8.1 Product furnished under this specification shall conform to the mechanical property requirements prescribed in Table 2 and Table 3 for the Copper Alloy UNS No. designation specified in the ordering information.

8.2 *Rockwell Hardness Requirement* —For the alloys and tempers listed in Table 3, product 0.5 in. [12 mm] and over in diameter or distance between parallel surfaces shall conform with the requirements prescribed in Table 3, when tested in accordance with Test Methods E18.

8.2.1 For Copper Alloys UNS Nos. C64200 and C64210 in tempers listed in Table 3, Rockwell hardness shall be the basis of acceptance or rejection for mechanical properties except when the tensile test is specified in the contract or purchase order.

8.3 *Tensile Strength Requirements*—Product furnished under this specification shall conform to the tensile requirements in Table 2 when tested in accordance with Test Methods E8 or E8M.

9. Performance Requirements

9.1 Residual Stress Test:

9.1.1 When specified in the contract or purchase order, the product shall be tested for residual stress according to the requirements of Test Method B154 or Test Method B858, and show no signs of cracking.

Warning—Mercury is a definite health hazard. With the Mercurous Nitrate Test, equipment for the detection and removal of mercury vapor produced in volatilization, and the use of protective gloves is recommended.

9.1.2 When the ammonia vapor test is used, the test pH value appropriate for the intended application shall be 10 unless otherwise specified by the purchaser.

NOTE 4—A residual stress test provides information about the adequacy of the stress relief of the material. Bar straightening is a method of mechanical stress relief. Stress relief annealing is a method of thermal stress relief.

9.2 *Piston Finish*—When specified, round rod over 0.5 in. [12 mm] in diameter shall be furnished piston finished. Refer to Specification **B249/B249M**.

10. Dimensions and Permissible Variations

10.1 The dimensions and tolerances for product described by this specification shall be as specified in Specification **B249/B249M** with particular reference to the following tables and related paragraphs:

10.1.1 *Diameter or Distance between Parallel Surfaces, Rod (Round, Hexagonal, Octagonal)*:

10.1.1.1 *Rod: Cold Drawn Tempers*—Refer to applicable **Table 2** on Tolerances for Diameter or Distances Between Parallel Surfaces of Cold-Drawn Rod.

10.1.1.2 *Rod, M30, O30, and O32 tempers*—Refer to Table 4 on Tolerances for Diameter or Distance Between Parallel Surfaces of As-Extruded Rod and Bar.

10.1.1.3 *Round Rod, M20 temper*—Refer to Table 6 on Diameter Tolerances for Hot-Rolled Round Rod.

10.1.1.4 *Piston Finish Rod*—Refer to Table 3 on Diameter Tolerances for Piston-Finished Rod.

10.1.2 *Distance between Parallel Surfaces, Bar (Rectangular and Square)*:

10.1.2.1 *Bar, Drawn Tempers*—Refer to Table 9 on Thickness Tolerances for Rectangular and Square Bar, and Table 11 on Width Tolerances for Rectangular Bar.

10.1.2.2 *Bar, M30, O30, and O32 Tempers*—Refer to Table 4 on Tolerances for Diameter or Distance Between Parallel Surfaces of As-Extruded Rod and Bar.

10.1.3 *Length of Rod, Bar and Shapes*—Refer to Table 13 on Length Tolerances for Rod, Bar, and Shapes, and Table 15 on Schedule of Lengths (Specific and Stock) with Ends for Rod and Bar.

10.1.4 *Straightness*:

10.1.4.1 *Rod and Bar*—Refer to Table 16 on Straightness Tolerances for Rod, Bar, and Shapes.

10.1.4.2 *Shafting Rod*—Refer to Table 17 on Straightness Tolerances for Shafting.

10.1.4.3 *Rod, Bar and Shapes of M20, M30, O30, and O32 Temper*—They shall be of sufficient straightness to meet the requirements of the intended application.

10.1.5 *Edge Contours*—Refer to section entitled, “Edge Contours.”

10.2 *Shapes*—The cross section dimensional tolerances for shapes shall be as agreed upon between the manufacturer and the purchaser.

11. Workmanship, Finish, and Appearance

11.1 When specified in the contract or purchase order, round rod over ½ in. [12 mm] in diameter shall be furnished as piston finish rod or shafting.

12. Test Methods

12.1 *Chemical Analysis*:

12.1.1 In cases of disagreement, determine the composition using the following methods:

Element	ASTM Test Methods
Aluminum	E478 , Titrimetric
Arsenic	E62
Copper	E478
Iron	E478 , Photometric
Lead	E478 , Atomic absorption
Manganese	E62
Nickel	E478 , Photometric
Phosphorous	E62
Silicon	E62
Tin	E478 , Photometric
Zinc	E478 , Atomic absorption
Cadmium	E53
Chromium	E118

12.1.2 Test methods to be followed for the determination of elements resulting from contractual or purchase order agreement shall be as agreed upon between the manufacturer or supplier and the purchaser.

13. Keywords

13.1 aluminum bronze bar; aluminum bronze rod; aluminum bronze shapes; UNS Alloy No. C61300; UNS Alloy No. C61400; UNS Alloy No. C61900; UNS Alloy No. C62300; UNS Alloy No. C62400; UNS Alloy No. C63000; UNS Alloy No. C63020; UNS Alloy No. C63200; UNS Alloy No. C64200; UNS Alloy No. C64210

SUMMARY OF CHANGES

Committee B05 has identified the principal changes to this specification that have been incorporated since the 2008 issue as follows:

(1) Added temper designation O26, hot rolled and temper annealed, to Section 7 and **Table 2** for C63000, high strength rod over 2 in. [50 mm] diameter.

B150/B150M – 12

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
