

Quality requirements for fusion welding of metallic materials —

Part 1: Criteria for the selection of the appropriate level of quality requirements

The European Standard EN ISO 3834-1:2005 has the status of a
British Standard

ICS 25.160.01

National foreword

This British Standard is the official English language version of EN ISO 3834-1:2005. It is identical with ISO 3834-1:2005. It supersedes BS EN 729-1:1995 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee WEE/-/1, Briefing committee for welding, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN ISO title page, the EN ISO foreword page, the ISO title page, pages ii to v, a blank page, pages 1 to 7 and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

Quality requirements for fusion welding of metallic materials -
Part 1: Criteria for the selection of the appropriate level of quality
requirements (ISO 3834-1:2005)

Exigences de qualité en soudage par fusion des matériaux
métalliques - Partie 1: Critères pour la sélection du niveau
approprié d'exigences de qualité (ISO 3834-1:2005)

Qualitätsanforderungen für das Schmelzschiessen von
metallischen Werkstoffen - Teil 1: Kriterien für die Auswahl
der geeigneten Stufe der Qualitätsanforderungen (ISO
3834-1:2005)

This European Standard was approved by CEN on 28 October 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN ISO 3834-1:2005) has been prepared by Technical Committee ISO/TC 44 "Welding and allied processes" in collaboration with Technical Committee CEN/TC 121 "Welding", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2006, and conflicting national standards shall be withdrawn at the latest by June 2006.

This document supersedes EN 729-1:1994.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Endorsement notice

The text of ISO 3834-1:2005 has been approved by CEN as EN ISO 3834-1:2005 without any modifications.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 3834-1 was prepared by Technical Committee ISO/TC 44, *Welding and allied processes*, Subcommittee SC 10, *Unification of requirements in the field of metal welding*.

This second edition cancels and replaces the first edition (ISO 3834-1:1994), which has been technically revised.

ISO 3834 consists of the following parts, under the general title *Quality requirements for fusion welding of metallic materials*:

- *Part 1: Criteria for the selection of the appropriate level of quality requirements*
- *Part 2: Comprehensive quality requirements*
- *Part 3: Standard quality requirements*
- *Part 4: Elementary quality requirements*
- *Part 5: Documents with which it is necessary to conform to claim conformity to the quality requirements of ISO 3834-2, ISO 3834-3 or ISO 3834-4*

NOTE A Technical Report ISO/TR 3834-6, *Quality requirements for fusion welding of metallic materials — Part 6: Guidance on implementing ISO 3834* is being prepared.

Requests for official interpretations of any aspect of this part of ISO 3834 should be directed to the Secretariat of ISO/TC 44/SC 10 via your national standards body, a complete listing which can be found at <http://www.iso.org>.

Introduction

Processes such as fusion welding are widely used to manufacture many products. In some companies, they are the key feature of production. Products may range from simple to complex. Examples include pressure vessels, domestic and agricultural equipment, cranes, bridges, transport vehicles and other items.

These processes exert a profound influence on the cost of manufacture and quality of the product. It is important, therefore, to ensure that these processes are carried out in the most effective way and that appropriate control is exercised over all aspects of the operation.

It is emphasised that ISO 3834 is not a quality management system standard replacing ISO 9001:2000. However, it can be a useful tool when ISO 9001:2000 is applied by manufacturers.

Specification of quality requirements for welding processes is important because the quality of these processes cannot be readily verified. Therefore, they are considered to be special processes as noted by ISO 9000:2000.

Quality cannot be inspected into a product, it has to be built in. Even the most extensive and sophisticated non-destructive testing does not improve the quality of the product.

For products to be free from serious problems in production and in service, it is necessary to provide controls, from the design phase, through material selection, into manufacture and subsequent inspection. For example, poor design may create serious and costly difficulties in the workshop, on site, or in service. Incorrect material selection may result in problems, such as cracking in welded joints.

To ensure sound and effective manufacturing, management needs to understand and appreciate the sources of potential trouble and to implement appropriate procedures for their control.

ISO 3834 identifies measures that are applicable for different situations. Typically, they may be applied in the following circumstances:

- in contractual situations: specification of welding quality requirements;
- by manufacturers: establishment and maintenance of welding quality requirements;
- by committees drafting manufacturing codes or application standards: specification of welding quality requirements;
- by organizations assessing welding quality performance, e.g. third parties, customers, or manufacturers.

ISO 3834 can be used by internal and external organizations, including certification bodies, to assess the manufacturer's ability to meet customer, regulatory or the manufacturer's own requirements.

Quality requirements for fusion welding of metallic materials —

Part 1: Criteria for the selection of the appropriate level of quality requirements

1 Scope

This part of ISO 3834 provides a general outline of ISO 3834 and criteria to be taken into account for the selection of the appropriate level of quality requirements for fusion welding of metallic materials, among the three levels specified in ISO 3834-2 ^[3], ISO 3834-3 ^[4] and ISO 3834-4 ^[5]. It applies to manufacturing, both in workshops and at field installation sites.

NOTE 1 ISO 3834-2, ISO 3834-3 and ISO 3834-4 provide complete sets of quality requirements for process control related to all fusion welding processes (for each process separately or in combination as specified). ISO 3834-5 specifies the documents with which it is necessary to conform to claim conformity to the quality requirements of ISO 3834-2, ISO 3834-3 or ISO 3834-4.

This part of ISO 3834 does not specify requirements for a total quality management system. However, Clause 6 identifies quality management system elements where their inclusion will complement ISO 3834.

NOTE 2 ISO 3834-2, ISO 3834-3 and ISO 3834-4 may be used on their own by a manufacturer or in conjunction with ISO 9001:2000.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 9000:2000, *Quality management systems — Fundamentals and vocabulary*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 9000:2000 and the following apply.

3.1

design specification

requirements for products specified by customers or by the organization in anticipation of customer requirements, or by regulation

NOTE The requirements for products and in some cases associated processes can be contained in, for example, technical specifications, product standards, process standards, contractual agreements and regulatory requirements.

3.2

qualified person

person whose competence and knowledge have been obtained by education, training and/or relevant practical experience

NOTE In order to demonstrate the level of competence and knowledge, a qualification test may be required.

3.3

construction

product, structure or any other welded item

3.4

manufacturer

fabricator

person or organization responsible for the welding production

3.5

sub-contractor

supplier of products, services and/or activities to the manufacturer in a contractual situation

3.6

welding operator

person who performs fully mechanised or automatic fusion welding processes

4 General outline of ISO 3834

ISO 3834 specifies quality requirements suitable for fusion welding processes of metallic materials. The requirements contained within this International Standard may be adopted for other welding processes. These requirements relate only to those aspects of the quality of the products, which may be influenced by fusion welding, without being assigned to any specific product group.

ISO 3834 therefore provides a method to demonstrate the capability of a manufacturer to produce products of the specified quality.

It was prepared such that:

- a) it is independent of the type of construction manufactured;
- b) it defines quality requirements for welding in workshops and/or on site;
- c) it provides guidance for describing a manufacturer's capability to produce constructions to meet specified requirements;
- d) it provides a basis for assessing a manufacturer's welding capability.

ISO 3834 is appropriate when demonstration of a manufacturer's capability to produce welded constructions, fulfilling specified quality requirements, is specified in one or more of the following:

- a specification;
- a product standard;
- a regulatory requirement.

The requirements contained within this document may be adopted in full or may be selectively deleted by the manufacturer if not applicable to the construction concerned. They provide a flexible framework for the control of welding in the following applications.

- Case 1: To provide specific requirements in specifications which require the manufacturer to have a quality management system in accordance with ISO 9001:2000 ^[1].
- Case 2: To provide specific requirements in specifications which require the manufacturer to have a quality management system other than ISO 9001:2000.

- Case 3: To provide specific guidance for a manufacturer developing a quality management system for fusion welding.
- Case 4: To provide detailed requirements for specifications, regulations or product standards that require control of fusion welding activities.

5 Selection of the appropriate level of quality requirements

The selection of the appropriate part of ISO 3834, specifying the required level of quality requirements, should be in accordance with the product standard, specification, regulation or contract. Because ISO 3834 may be used in a variety of situations and for different applications, definitive rules on the level of quality requirements to be adopted in individual circumstances cannot be given in this clause.

ISO 3834 may be applied in a variety of situations. The manufacturer should select one of the three parts specifying different levels of quality requirements, based on the following criteria related to products:

- the extent and significance of safety-critical products;
- the complexity of manufacture;
- the range of products manufactured;
- the range of different materials used;
- the extent to which metallurgical problems may occur;
- the extent to which manufacturing imperfections, e.g. misalignment, distortion or weld imperfection, affect product performance.

A manufacturer that demonstrates compliance to a particular quality level is considered to have established compliance to all lower levels without further demonstration [e.g. a manufacturer compliant to comprehensive quality requirements (i.e. ISO 3834-2) demonstrates compliance with standard quality requirements (i.e. ISO 3834-3) and elementary quality requirements (i.e. ISO 3834-4)].

Annex A lists criteria which assist in the selection of the appropriate part of ISO 3834.

6 Elements to be considered for a quality management system to complement ISO 3834

ISO 3834 contains many attributes that contribute to a quality management system (QMS). This clause identifies those QMS elements that the manufacturer should consider implementing to support the ISO 3834 quality requirements:

- a) control of documents and records (see ISO 9001:2000, 4.2.3, 4.2.4);
- b) management responsibilities (see ISO 9001:2000, Clause 5);
- c) provision of resources (see ISO 9001:2000, 6.1);
- d) competence, awareness and training of operational personnel [see ISO 9001:2000, 6.2.2, 7.5.2 b)];
- e) planning of product realization (see ISO 9001:2000, 7.1);
- f) determination of requirements related to the product (see ISO 9001:2000, 7.2.1);
- g) review of requirements related to the product (see ISO 9001:2000, 7.2.2);
- h) purchasing (see ISO 9001:2000, 7.4);
- i) validation of processes (see ISO 9001:2000, 7.5.2);
- j) customer property (see ISO 9001:2000, 7.5.4);
- k) internal audit (see ISO 9001:2000, 8.2.2);
- l) monitoring and measurement of product (see ISO 9001:2000, 8.2.4).

ISO 9004:2000^[2] provides guidance on the development and implementation of a quality management system.

Annex A (informative)

Criteria which assist in the selection of ISO 3834-2, ISO 3834-3 or ISO 3834-4

No.	Element	ISO 3834-2	ISO 3834-3	ISO 3834-4
1	Review of requirements	review required		
		record is required	record may be required	record is not required
2	Technical review	review required		
		record is required	record may be required	record is not required
3	Sub-contracting	treat like a manufacturer for the specific subcontracted product, services and/or activities, however final responsibility for quality remains with the manufacturer		
4	Welders and welding operators	qualification is required		
5	Welding co-ordination personnel	required		no specific requirement
6	Inspection and testing personnel	qualification is required		
7	Production and testing equipment	suitable and available as required for preparation, process execution, testing, transport, lifting in combination with safety equipment and protective clothes		
8	Equipment maintenance	required to provide, maintain and achieve product conformity		no specific requirement
		documented plans and records are required	records are recommended	
9	Description of equipment	list is required		no specific requirement
10	Production planning	required		no specific requirement
		documented plans and records are required	documented plans and records are recommended	
11	Welding procedure specifications	required		no specific requirement
12	Qualification of the welding procedures	required		no specific requirement
13	Batch testing of consumables	if required	no specific requirement	
14	Storage and handling of welding consumables	a procedure is required in accordance with supplier recommendations		in accordance with supplier recommendations
15	Storage of parent material	protection required from influence by environment; identification shall be maintained through storage		no specific requirement

No.	Element	ISO 3834-2	ISO 3834-3	ISO 3834-4
16	Post-weld heat treatment	confirmation that the requirements according to product standard or specifications are fulfilled		no specific requirement
		procedure, record and traceability of the record to the product are required	procedure and record are required	
17	Inspection and testing before, during and after welding	required		if required
18	Non-conformance and corrective actions	measures of control are implemented procedures for repair and/or rectification are required		measures of control are implemented
19	Calibration or validation of measuring, inspection and testing equipment	required	if required	no specific requirement
20	Identification during process	if required		no specific requirement
21	Traceability	if required		no specific requirement
22	Quality records	if required

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover. Tel: +44 (0)20 8996 9000. Fax: +44 (0)20 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: +44 (0)20 8996 9001. Fax: +44 (0)20 8996 7001. Email: orders@bsi-global.com. Standards are also available from the BSI website at <http://www.bsi-global.com>.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre. Tel: +44 (0)20 8996 7111. Fax: +44 (0)20 8996 7048. Email: info@bsi-global.com.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration. Tel: +44 (0)20 8996 7002. Fax: +44 (0)20 8996 7001. Email: membership@bsi-global.com.

Information regarding online access to British Standards via British Standards Online can be found at <http://www.bsi-global.com/bsonline>.

Further information about BSI is available on the BSI website at <http://www.bsi-global.com>.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.
